Database:

1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 77.827; Variance 184.008; scale 0.423

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 14, Application US/08232463
Patent No. 5670367
GENERAL INFORMATION:
APPLICANT: DORNER, F.
APPLICANT: FALKNER, F. G.
TITLE OF INVENTION: RECOMBINANT FOWLPOX VIRUS
NUMBER OF SEQUENCES: 52
CORRESPONDENCE ADDRESS:
ADDRESSE: Foley & Lardner
STREET: 1800 Diagonal Road, Suite 500
CITY: Alexandria
COUNTRY: USA
ZIP: 22313-0299
COMPUTER: IDEA PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTMARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/232,463
FILING DATE: APPLICATION DATA:
APPLICATION NUMBER: US/08/232,463
FILING DATE: APPLICATION DATA:
APPLICATION NUMBER: US/08/232,463
FILING DATE: APPLICATION NUMBER: 29,768
REFERENCE/DOCKET NUMBER: 29,768
REFERENCE/DOCKET NUMBER: 30472/114 IMMU
TELEPHONE: (703)683-4109
INFORMATION FOR SEQ ID NO: 14:
SEQUENCE CHARACTERISTICS:

WPI; 94-279739/34. P-PSDB; R65152.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1036
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARS or compsns. comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.

This generic formula can also be represented as follows: X(NNB)1(TGC)(NNB)10(TGC)2(NNB)4X(NNB)8(TGC)(NNB)9Y: X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in 070465-68. Other specific peptides generated by these generic sequences are shown in R65151-54. TSARs are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The objectides are also
This sequence represents a human or mammalian DNA replication origin consensus sequences of the invention, designated uniorsconsensus. Administration of the consensus sequence or an anti-gene (comprising a double stranded copy of the consensus) is used to inhibit DNA replication in vivo or in vitro. The consensus sequences can also be inserted into an expression vector, used subsequently for in vitro transfection of mammalian cells, to control initiation of DNA replication. They can also be used used to maintain circular plasmids that are capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  25-JUN-1998.

                                                          Disclosure; p; English.
Random point mutations were introduced into the alpha fragment E.coli beta-galactosidase. The wild type sequence was obtained it coll beta-galactosidase. The wild type sequence was hybridised it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of w
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  05-MAY-1988.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 3; Page 14; 23pp; English.
Oligonucleotide probe MK14-A consists of nucleotides 5-95 of (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    31-MAY-1994 (first entry)

The sequence is that of a Streptococcal polypeptide coding region. The polypeptide can potentially be used for the diagnosis and prevention of bacterial infections, especially SP infection. It may be used for the treatment of diseases such as otitis media, conjunctivitis, pneumonia, bacteremia, meningitis, sinusitis, pleuriempyema, endocarditis or infection of the cerebrospinal fluid. Base substituted E.coli beta-galactosidase alpha-fragment.
E.coli beta galactosidase alpha-fragment; haso colors.
Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; p; English.

Random point mutations were introduced into the alpha fragment of E.coli beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and them expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          05-MAY-1988.

PT pneumoniae - or their epitope-containing fragments, useful in
PT protective or therapeutic vaccines, and for diagnosis
PT protective or therapeutic vaccines, and for diagnosis
PT protective or therapeutic vaccines, and for diagnosis
PT protective or therapeutic vaccines, and for diagnosis
PT protective or therapeutic vaccines from Streptococcus pneumoniae.
PT protection caid sequence encoding the Streptococcus pneumoniae protein
PT protection caid sequence encoding the Streptococcus pneumoniae.
PT protective antibodies against
PT protection can be useful in vaccines for inducing protective antibodies against
PT protection caid or meningitis. Probes based on the nucleic acid
PT protection protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, ce.g. by injection, orally or through the skin, typically at 0.01-1000
PT present seducine protein in per dose.
PT protective or their protein and for passive to purify the protein and for passive contains an expectation or passive contains an expectation or passive contains an expectation or passive contains and per dose.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 91
                                                                                                                                          present invention describes a computer readable medium which has nucleotide sequences SEQ ID NO:1 to 391 (V52134 to V52524) recorded it, or a representative fragment or a sequence at least 95% identical SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 391 (V52134 to V52524) are genomic fragments from Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              98-272225/24.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ggtgatgataagtatcttcgccagttagaatcagaagtgccagtttattattatggcgtc

Claim 1; Page 1983; 2084pp; English.

CR A computer readable medium has been developed which has recorded on it computer readable medium has been developed which has recorded on it cross an include the sequences isolated from the Enterococcus faecalis genome. CR 119319 represent these nucleotide sequences which are primary curie identify fragments of the Enterococcus faecalis genome with cross commercial importance. The products can be used to detect the presence cross faecalis in samples. They can also be used for commercial importance infection in an animal and monitoring crossing Enterococcus faecalis in samples and for identifying agents which can be used to compose the products can be used for modulate the growth or pathogenicity of Enterococcus faecalis, or can be used in various or in vitro. In particular the cross properties encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcus.

A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcus infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Barash SC, Dillon WPI; 99-045171/04.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Helicobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agents are useful to treat in-dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The MurC polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for raising antibodies; to identify modulators or specific receptors; in rational drug design and as an immunogen for vaccines. The MurC gene sequences are useful in antisense/ribozyme therapeutics; to detect mutant MurC gene; for chromosomal mapping; to determine bacterial serotype; and for genetic immunisation. The present sequence represents a partial nucleotide sequence (MurC ORF) of the MurC gene.

Sequence (MurC ORF) of the MurC gene.

PS Claim 1. Page 146: 390pp; English.

CC This sequence encodes a Staphylococcus aureus protein of unknown

CC function, and represents a DNA Sequence of the invention.

CC (NCIMB 40771). Host cells containing the DNA sequences are used to

CC (NCIMB 40771). Host cells containing the DNA sequences are used to

CC produce polypeptides or fragments. The proteins are used in the treatment

CC of disease, for inducing an immune response by administering them, to

CC produce antibody and/or T-cell immune response. Antagonists of the

CC proteins are used for the inhibition of bacterial polypeptides.

CC conditions which may be treated include bacterial infections, especially

CC respiratory, cardiac, gastrointestinal, central nervous, eye, kidney,

CC urinary tract, skin, bones and joints. The proteins can also be used to

CC dentify antimicrobial compounds which are boroad spectrum antibiotics,

CC especially useful in the treatment of H. pylori infection.

Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the computer readable medium.

Preside the first stably lococcus aureus and related murity polypeptide from Staphylococcus aureus and related murity nucleic acid - useful in diagnosis, treatment and prevention of nucleic acid - useful in diagnosis, treatment and prevention of pacterial infections (liam 2; Pages 4-5; 39pp; English.

Claim 2; Pages 4-5; 39pp; English.

The invention relates to a UDP-N-acetylmuramate:L-alanine ligase (MurC polypeptide) encoded by the S. aureus MurC gene. Host cells containing an expression system comprising the MurC gene can be used for the recombinant production of the polypeptide. Agonists or the MurC polypeptide are used to treat conditions requiring increased activity or expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g. bacterial (especially S. aureus) infections. They are also useful against
                                                                                                                                                                                                                                                                                                                                                                                                  EP-889123-A2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g. bacterial (especially S. aureus) infections. They are also useful against Helicobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agents are useful to treat in dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The Murc polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for raising antibodies; to identify modulators or specific receptors; in rational drug design and as an immunogen for vaccines. The Murc gene sequences are useful in antisense/ribozyme therapeutics; to deter mutant Murc gene:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for chrome

anti-S.aureus vaccines
Claim 1; Page 1287-1288; 3271pp; English.
This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention: The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Staphylococcus aureus contig SEQ ID #392.
